Bear Spring CWMU Description

Bear Spring CWMU is cut east-west by Dry Creek and north-south by State Road 68. Dry Creek starts at about **7200 feet** and flows east and then south and exits the Unit at about **4400 feet**. The higher elevations are on the west below Snow Basin Ski Resort. Then with a moderate slope the terrain slopes to the southeast and drops down into the Dry Creek cut before exiting the Unit.

Rocky Mountain Gambel Oak-Mixed Montane Shrubland (41) is the dominant land cover type on the Bear Spring Cooperative Wildlife Management Unit (CWMU). There are many large patches of Rocky Mountain **Bigtooth Maple Ravine Woodland** (23) dispersed among the Gambel Oak, as are smaller patches of Inter-Mountain Basins Montane **Sagebrush Steppe** (62). There are patches of Rocky Mountain **Aspen Forest and Woodland** (22) on the west side, more in the middle of the Unit are patches of Rocky Mountain Lower Montane (79), and scattered about are patches of Recently Burned (116) areas. There are some minor areas of Colorado Plateau Pinyon-Juniper Woodland (36) scattered about.
